Giant Flowered and Large Flowered Hyacinths

Mammoth Bulbs for Giant Spikes For beds, borders, pots or glasses where the largest flower spikes are wanted. The spikes will be truly giant. If they are to be grown indoors, plant only one variety in a pot or pan.

Large Bulbs The spikes produced from Burpee's Large or so-called Bedding Size Bulbs will be a little smaller than the Giants but just as pretty; selection of varieties is the same. Many prefer them because of the saving.

Burpee's Giant Flowered Hyacinths

The Finest for Beds, Borders and for Growing Indoors

Among the many flowers grown from fall planted bulbs, the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more attractive than hyacinths in the house during the winter! Equally effective and beautiful are beds, borders or groups here and there among perennials, in combination with pansies or in front of shrubs.

MAMMOTH BULBS FOR GIANT SPIKES

The spikes produced from Burpee's Mammoth Bulbs will be truly giant. They are carefully selected, of the highest quality, and are particularly desirable where the largest flower spikes are wanted in beds or pots.

DAFFODILS

ARE EASY TO GROW

Outdoors: Plant as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and nature of the soil. In very cold locations, mulch the ground with straw or leaves after it is frozen.

Indoors: Put several bulbs, about 1 in. apart (same variety), in a pot. Barely cover the bulbs with soil, water and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing the bulbs indoors.

Burpee furnishes the choicest imported bulbs.

NARCISSUS OR DAFFODILS

As daffodils bloom early, last a long time, and may be had in so many lovely varied forms, they have few equals as garden flowers. They are most desirable for any garden purpose—in masses, in beds or borders, in groups of twelve or more here and there in the hardy perennial border, or in the foreground of shrubbery. For naturalizing in large quantities, no other flower is more suitable. They are ideal, easily grown subjects for winter blooming in the house. Complete instructions are printed on every bag of bulbs.

GIANT IDEAL DARWIN TULIPS

Giant Ideal Darwins are superior to many of the older Darwins, the flowers, in most instances, being larger and of better substance, the stems taller and stronger. They usually begin to bloom several days before the regular Darwins and often last for a longer time. The big flowers are truly magnificent, and we recommend them for garden and cutting. Many are valuable for growing inside during the winter.

Giant Darwin Tulips

The chief characteristics of Giant Darwin Tulips are the attractively shaped flowers, tall stems, and lovely colors. They are wonderful in masses or in groups of twelve or more here and there among perennials, and lovely for cutting.

If the widest assortment of colors is desired in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all usually bloom during May. The height given for each variety is average and some variation is natural in different localities and seasons. We offer a choice selection of better varieties.

Cottage or May Flowering Tulips

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May, hence the name, "May Flowering." The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to a great extent in other late tulips. Planted with others, they provide a complete color range.

Cottage Tulips are as varied in their range of coloring as the Darwins and are mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 21. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden use.

How to Grow Tulips

Outdoors: Tulips should not be planted where grown the last two seasons. Use a sunny position. Do not use fresh manure at planting time; rotted manure or bone meal may be worked into soil which must be well-drained. Plant bulbs 5 to 6 in. deep; 6 to 8 in. apart.

Indoors: A mixture of 2/3 clean garden soil and 1/3 leaf mold to which bone meal has been added will give best results. A 6-inch pot holds about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly. Put pots in a cold-frame or heel-in in the garden for 8 weeks. Move pots indoors, bringing gradually to the average room temperature.

Early Species Tulips

Tulip species are mostly natives of Asia Minor and Central Asia, quite different in habit, requirements and uses from all other tulips. Their popularity is increasing each year as they have a grace and charm that endear them to everyone. They are ideal for grouping in either the rock garden or the hardy border. All are early blooming—come into full display in March and April.

Burpee's Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant.

All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, plant the Easter Lilies offered on page 31 which also may be grown successfully outdoors in sections of the country where the winters are mild.

Delivery of Hardy Garden Lily Bulbs

Hardy Garden Lilies are sent you in the fall just as soon as the bulbs are thoroughly cured and in proper condition for planting. Some varieties will not be ready until November or early December. Plant in the garden as soon as possible after they are received. If you live where the soil freezes early cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. The purpose of the covering is to keep the ground frozen so alternate freezings and thawings will not injure root growth during the winter. Remove covering gradually in the spring, removing all after danger of frost is past.

Lawn Grass Seed for Fall Sowing

The best time to start your lawn, or to repair it, is during the cool weather of early fall. At this time the weather is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. For new lawns, sow 1 lb. of grass seed to 200 sq. ft.; 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass for 500 to 750 sq. ft. To improve old lawns, half these quantities should be sufficient.
